

The Medi Cam™ was born out of a need for Doctors to assist EMT crews while in the field.

ER Doctors and/or a Doctor from any location with internet access worldwide can login to a particular Ambulance and Mitigate coordinated health care with the EMT crew of that Ambulance.

Using videoNEXT™ GPS functionality, both Doctors and Dispatchers can access travel routes and base decisions on traffic, and closest available Health Care facility.

The Medi Cam™ in unison with videoNEXT™ is HIPAA compliant.

Additional security such as certificates, VPN and Hierarchical access rights can be added for extra precaution if needed.

Features
