

Virtual Ambulance Healthcare | Real-Time Video over Cellular

Medi Cam™ is a service which was born out of the growing demand from ER Doctors who wish to assist EMT crews by seeing what they see, real-time over a secure 4G cellular network, while in route to the hospital via Ambulance.

Doctors can remotely pinpoint and access a specific Ambulance and begin to Mitigate coordinated health care with the EMT crew of that Ambulance via video and integrated two-way audio.

Using the Medi Cam HIPAA secure hosted service, and GPS functionality, both Doctors and Dispatchers can access travel route information, providing the closest Health Care facility and the best route to it.

The Medi Cam service runs secure over a cellular Mobile Private Network (MPN)

- ✓ Remote secure login from anywhere internet exists.
